To the FCC: Please reject the NAB's petition 04-160!
Please do not interfere with HEALTHY competition.

The nation's broadcasters are afraid of satellite radio because they want to maintain a stranglehold on advertising dollars. In exchange, they offer no variety, and more advertising than programming. Like cable and direct to home television, XM offers consumers what they want, and the NAB wants to limit XM's ability to provide the consumer what they want by preventing them from offering what is deemed as "local" programming. In a nutshell, the NAB is against progress and cannot keep up.

Thank you for your time.
